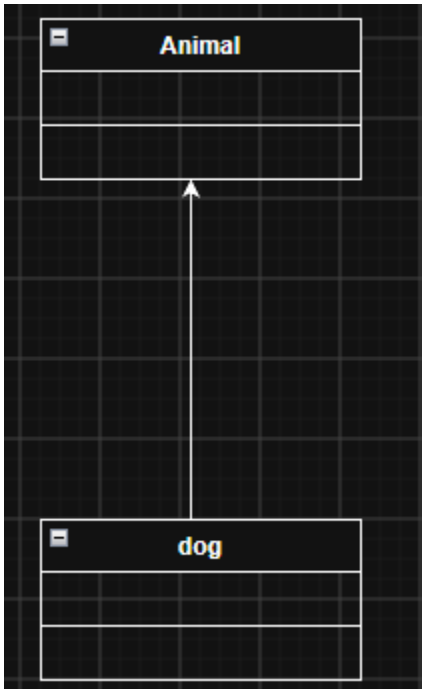
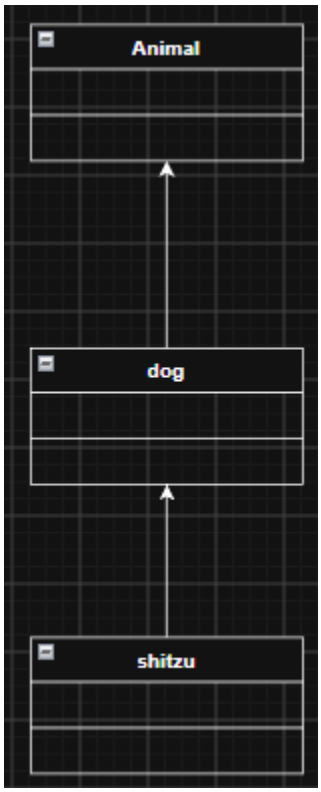
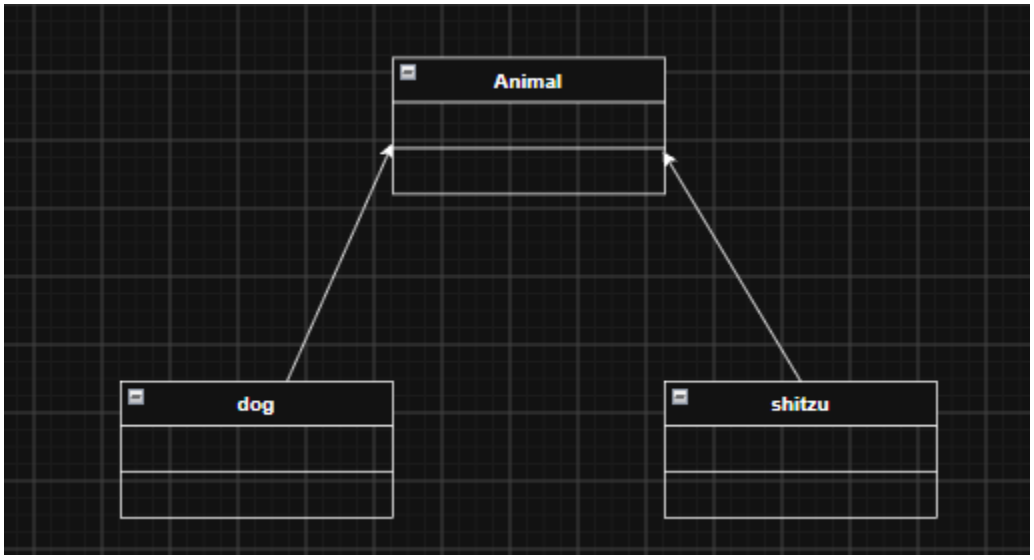
Single:



Multilevel:



Hierarchical:



2. Code:

```
class Parent:
    def __init__(self, name):
        self.name = name

    def get_name(self):
        return self.name

    def set_name(self, name):
        self.name = name

    def func1(self):
        print("This function is in the parent class.")
        print("Name:", self.name)

class Child(Parent):
    def func2(self):
        print("This function is in the child class.")
        print(self.name, "is using inheritance!")

obj = Child("Mauris")
obj2 = Child("Alex")
```

```
print("Original names:")
print(obj.get_name())
print(obj2.get_name())

obj.set_name("John")

print("\nAfter changing the name:")
print(obj.get_name())

print("\nFirst object:")
obj.func1()
obj.func2()

print("\nSecond object:")
obj2.func1()
obj2.func2()
```
